History[edit | edit source] Barra do Garças is located in the midwestern region of Mato Grosso and is considered to be the main city in an area known as Vale do Araguaia. In 2020, the IBGE estimated the population of Barra do Garças to be 61,135. The village was founded on June 13, 1924 by Antônio Cristino Côrtes, Francisco Luiz Esteves and Francisco Dourado. This date was notable as the day of the patron saint of Saint Antônio. The main economic activities at that time were agriculture, livestock production, and mining. The city gained its emancipation on September 15, 1948 with 212 thousand km<sup>2</sup> and later expanded to 273,476 thousand km<sup>2</sup>. It is an important regional center of the state of Mato Grosso although it is close, both geographically as well as economically, to the state of Goiás. The current economy is based on tourism and agricultural production of corn, rice, and soy. Described by Heinrich Kuhl in 1820, it is classified in its own genus owing to its distinctive elongated beak. Its closest relative is the mulga parrot. It is not easily confused with other parrot species; both adult sexes have a bright crimson crown, green-yellow cheeks, and a distinctive long bill. The wings, back, and long tail are dark green, and the underparts are purple-blue. Found in woodland and open savanna country, the red-capped parrot consumes seeds (particularly of eucalypts), flowers, berries, and occasionally insects. Nesting takes place in tree hollows. Although the red-capped parrot has been shot as a pest, and affected by land clearing, the population is growing and the species is not threatened. In captivity, it has a reputation of being both anxious and difficult to breed. (Full article...)
