Philips smart TV is one of those renowned TVs which have gained more popularity. But occasionally it creates some frustrating issues like not turning on or keeps turning on & off. At times, it has no sound or no picture display or it starts blinking red light. Apps got crash, cant connect to Bluetooth, or even cant connect to Wi-Fi are those common issues that create worries now and then. Whenever you face any kind of technical issues, power reset your TV without any second thought. This method is so efficient that itll resolve almost 80% of every problem. The rest 20% can be solved easily by a proper troubleshooting guide. Here you will find every Philips Smart TV problem and solutions. Read through the comprehensive article. So, leave your worries behind and count on us to have a better understanding of Philips TV troubleshooting methods. Here we go Note: You can also read how to fix Philips TV blinking red light 3 times. Your Philips smart TV is not working mainly due to a low power supply or faulty cable connections. If the TV is stuck in standby mode, the Philips TV not booting up issue happens. Press the power button and wait for your TV to turn on. If your Philips TV not powering on, press the Standby button on the remote. If still Philips TV not switching on, unplug your TV from the wall outlet and disconnect all the devices connected to your TV. Leave them disconnected for at least 60 seconds. After that, power them back. Press the Source button to see if the TV is on a different source. If Philips TV not getting power, check all the wiring connections whether there are any damages or if not securely connected. Also, ensure there is enough power supply. Plug them into different wall outlets directly. When Philips TV wont stay on, there is a possibility that the Sleep Timer Mode or ECO Mode got enabled. Sometimes outdated software or CEC features can be the reason for this issue. Philips 4k smart TV keeps turning off if it gets overheating or the motherboard gets fried out. By any chance, if the TV got stuck in the reboot loop, Philips TV keeps restarting. Perform a Power Reset on your TV and look for any defective wiring connections. Also, check if the Power button of your remote got stuck. Unplug all the devices. Disable the Sleep mode and the ECO mode. You should also disable the CEC feature to see if it can work out. Update your TV with the latest version of the software. If your Philips TV keeps rebooting, try Wipe Data Tool. Itll hopefully resolve the issue. To prevent overheating, clean the ventilation system. If Motherboard failure is detected, replace it with the help of experts. Behind the Philips TV no picture issue, the fault can be hidden in the HDMI cable or antenna. Either those are defective or not hooked up in the correct input source. There is a possibility that the image setting is wrong. When the issue is Philips TV no picture but sound, clearly, the backlight is broken. First, reset your TV and check the HDMI cables condition. Check the HDMI cable or antenna to ensure theyre on the correct input source. If the connection is good, perform an Auto Program Search to check if the Installation mode (Antenna or Cable) is selected correctly. Also, if the Philips TV screen goes black, but the sound still works, press the Source button on your TV to see whether the TV is in the correct image reception source. If the backlight is broken, it causes problems with the Philips TV picture not working. Contact the service center. Amid Philips TV sound, not working issues, the silly reason can be the low sound level. Even when the TV is properly hooked up, the enabled SAP option is one of the two main reasons for this issue. The other reason is speakers arent active. If the sound is too low, adjust the volume level. Ensure the TV speakers are active on your TV. You can also play the HD Demo Clip on the TV to see if the TV speakers are working fine. Check the correct TV location is selected on the Philip TV. Try to hear the sound by using external devices. If it is heard, the issue is with the TV. Disable the SAP [Secondary Audio Program] option. Set the Sound setting to PCM/Auto. Reset the Sound Setting. Also, check if this issue is occurring by the broadcasting Media. Also read how to fix Philips Tv sound cutting out the issue. Philips TV not connecting to the network is another common issue among users. At times, due to a slow Wi-Fi connection or interference from other wireless devices, Wi-Fi cant connect to the TV. For outdated software, wrong Wi-Fi connections, or the security options of the router, the problem occurs. In case of a slow Wi-Fi connection, contact the service provider. Look for the WPS button on your router. While connecting to the internet connection, you can choose WPS instead of selecting scan. Reset your router by unplugging it for about 60 seconds. Keep your router near the TV to avoid signal interference. Reconnect your Wi-Fi to your TV by double-checking the password. Check the security options of the router like cloud protection is disabled or deactivate the option of hiding/invisible SSID on your router. Change the DNS preference of your network. Perform a factory reset of your TV and reinstall it. If still Philips TV not finding Wi-Fi, try a wired connection via ethernet cable with your TV and the router. Due to an unstable Wi-Fi connection or not assigning the IP address, apps on Philips TV fail to work. Full TV memory storage, outdated software, or cache files can also be the reasons for this issue. Check if your Wi-Fi connection is stable for the apps to stream properly. Check whether your TV has an assigned IP address. Clear your internet memory and reconnect your Wi-Fi correctly. Restart your TV to remove the app glitches of your TV. Update the software of your TV as well as the crashed app. You can also enable the Auto-Update App option to resolve the issue. Clear cache of the specific app which is buffering. Uninstall the app and reinstall it. Reinstall your TV if still, apps have not worked out. Among the reasons for Philips smart TV not responding to the remote, dead or misplaced batteries can be counted as the main reason. Anyway, if any other devices are meddling in the remote functioning or at the last, for defective remote sensor, the Philips TV remote not working light blinking occurs. Check the batteries of your remote. If theyre no longer functioning, replace the batteries with new ones. Remove the batteries of your remote and press the power button for 15 seconds. Also, press each button of the remote and give them a few seconds to engage. Re-insert the batteries then. Repair your remote with your TV. Ensures that there is no interference in the way of your remote functioning. Operate your TV by keeping the remote close to the TV. Check the remote sensor if all the above methods fail to work. Philips TV not turning on red light issue mainly occurs due to faulty power supply. The TV may not be getting enough power, or the software is out of date. If Philips TV not working red light is flashing, which means the TV is still in Standby Mode. First, check the cable connections of the TV. Ensure the TV is getting enough power. Turn on your TV and press the Standby button on the remote. Ensure that the power cable on the display and the VGA cable with trailing audio cables are connected correctly between the MONITOR of the TV and VGA1 of the display. Power cycle your TV. Leave your TV unplugged for a long time. Plug your TV into a different wall outlet. Ensure your software is up to date. If Philips TV red light stays on, there can be Blown capacitors. If its, you need the help of the manufacturer. Philips Android TV Bluetooth not working mostly happens due to incompatibility of the devices. If there is any signal interference or the distance between the devices can cause the issue. Just like any other problem, first, restart your TV. If Philips TV does not find Bluetooth, ensure both devices are compatible. Also, make sure there is no signal interference. The device must be fully charged before pairing. Turn off your Bluetooth setting and turn it back on. Update your Philips TV software. Disconnect all other Bluetooth connections. Make sure your TV and the device are not far away. Keep your Wi-Fi router away from your TV and the device. Also, ensure youre connecting the supported Bluetooth devices to your Philips TV. For example, only the latest models of Philips Smart TV support BT5.0. Select Apps from the Home menu. Choose Settings and then the Auto Update option. Select Auto Update Apps At Any Time. Navigate to Settings and select Apps. Now go to See All Apps. Choose Show System App and select the app. Select Clear Cache and press OK. From the home menu, go to Settings and select Update Now. Press OK to update. Thats it! Now you know about the possible solution to Philips Smart TV Problems. Hopefully, youll troubleshoot your TV with ease. In any case, if you find any more technical issues, dont hesitate to inform us. Well try to reach you at the earliest opportunity. Television is a crucial part of our daily lives, providing entertainment, news, and information to millions of households around the world. When it comes to watching TV, sound is as important as the picture quality. Philips TVs are known for their high-quality display and sound, but sometimes users may face issues with low or no sound coming from their TV. This can be frustrating, especially when youre trying to enjoy your favorite shows or movies. There are several reasons why your Philips TV may have low or no sound, ranging from simple settings adjustments to more complex hardware issues. In this article, we will explore some common causes of low or no sound on Philips TVs and provide step-by-step solutions to fix these issues. Check the Volume SettingsThe first thing you should do when experiencing low or no sound on your Philips TV is to check the volume settings. Its possible that the volume may have been accidentally turned down or muted. To check the volume settings, simply press the volume up button on your remote control or directly on the TV. Make sure that the volume is turned up to a reasonable level and that the mute function is not activated. If the volume settings appear to be normal and the sound is still low or non-existent, move on to the next steps. Another common reason for low or no sound on Philips TVs is incorrect audio output settings. Your TV may be set to output sound through a different device, such as a soundbar or external speakers, which are not connected or turned on. To check the audio output settings on your Philips TV, follow these steps:Press the Menu button on your remote control.Navigate to the Sound or Audio settings.Select Audio Output and make sure that the TV speakers are selected as the output source.If you are using external speakers or a soundbar, make sure they are connected properly and turned on.Once you have confirmed the audio output settings, test the sound to see if the issue has been resolved.Check the Cable ConnectionsPoor cable connections can also cause low or no sound on your Philips TV. Make sure that all audio cables are securely connected to the TV and any external devices, such as cable boxes, DVD players, or gaming consoles. If you are using HDMI cables, make sure they are plugged in properly and that the TV is set to the correct HDMI input. If you are using external speakers or a soundbar, check the connections between the TV and the speakers to ensure they are secure. You may also want to try using a different cable to rule out the possibility of a faulty connection. Sometimes, simply restarting your Philips TV can resolve sound issues. To restart your TV, follow these steps:Press the power button on your remote control to turn off the TV.Unplug the TV from the power outlet and wait for a few minutes.Plug the TV back in and turn it on using the power button on the remote control.After restarting the TV, test the sound to see if the issue has been fixed. Outdated software can also cause sound issues on Philips TVs. Make sure that your TV is running the latest software version by following these steps:Press the Menu button on your remote control.Navigate to the Settings or System menu.Select Software Update and choose Update Now to check for new software updates.If a new update is available, follow the on-screen instructions to download and install it.After updating the TV software, test the sound to see if the issue has been resolved.Reset the TV to Factory SettingsIf none of the above solutions have worked, you may need to reset your Philips TV to factory settings. This will restore the TV to its original settings and may help fix any software-related issues causing low or no sound. To reset your TV to factory settings, follow these steps:Press the Menu button on your remote control.Navigate to the Settings or System menu.Select Reset to Factory Settings or Restore Default Settings.Follow the on-screen instructions to reset the TV.After resetting the TV, test the sound to see if the issue has been fixed. If you have tried all of the above solutions and are still experiencing low or no sound on your Philips TV, it may be time to contact Philips support for further assistance. You can reach out to the support team through their website, by phone, or by visiting a local service center. They will be able to help diagnose the issue and provide a solution to fix the sound problems on your TV.In conclusion, experiencing low or no sound on your Philips TV can be frustrating, but there are several solutions you can try to resolve the issue. By checking the volume settings, audio output, cable connections, restarting the TV, updating the software, resetting to factory settings, and contacting Philips support, you should be able to fix the sound problems and continue enjoying your favorite shows and movies on your Philips TV. Subrato ChatterjeeUpdated September 26, 2023 Its no secret that Philips Smart TVs are known for their excellent picture and audio quality, making them a popular choice for consumers who are looking for a premium viewing experience. There are, however, some users who may experience sound problems after updating their Philips Smart TVs. It can be very frustrating to have this issue happen while watching your favourite movie or TV show. You can troubleshoot and fix sound issues on your Philips Smart TV with a few useful tips and tricks. In this article, we will provide you with some helpful guidance to help you fix your TV's sound not working issue. Heres how to fix sound issues on your Philips Smart TV if youre experiencing them. You may experience sound problems after a recent update on your Philips Smart TV sound not working issue. Here are some of the most common causes: Software bugs:On Philips Smart TVs, firmware bugs can affect the audio function. During an update, these bugs can be introduced, resulting in a malfunctioning sound system.Incorrect audio settings:Your Philips Smart TV may have sound issues if the audio settings are incorrect. In some cases, the sound may not be working because the TV is mute or the volume is too low.Faulty cables:You may also have faulty cables on your Philips Smart TV if the sound does not work. A damaged HDMI or audio cable can cause a sound problem if they are not properly connected.Outdated firmware:There is a possibility that your Philips Smart TV may have outdated firmware that is causing the sound problem. It is possible to have sound problems if the TVs firmware is not up-to-date.Hardware issues:It is possible for Philips Smart TVs to experience sound problems after an update due to hardware issues.In order to fix the sound problem on your Philips Smart TV, you must identify its root cause and take appropriate steps to resolve it. Here are some fixes that will help you resolve the Philips Smart TV sound not working after the recent update:Fix 1: Check The Audio SettingsIn order to resolve sound not working after an update on your Philips Smart TV, you must first check the audio settings. Heres what you need to do: If you have an external audio device, such as a soundbar or home theatre system, turn it off as well.Make sure both the TV and audio devices are unplugged.Make sure you wait at least 30 seconds before plugging in the power cords again.Wait until your Philips Smart TV is fully booted up before switching it on.Ensure that your external audio devices are turned on and that they have fully booted up before using them.In order to determine if the problem has been resolved, test the sound on your Philips Smart TV.Fix 3: Check the HDMI And Audio CablesWhen troubleshooting sound issues on your Philips Smart TV after a recent update, it is important to check the HDMI and audio cables. You can do this by following these steps: Make sure all external audio devices, such as your Philips Smart TV and soundbar, are turned off.See if there are any visible damages, such as frayed or bent ends, cuts, or kinks on the HDMI cable. Try replacing the cable if you see any damage.If your Philips Smart TV has an HDMI port and any external audio devices, make sure that the HDMI cable is properly connected. You may need to tighten it if it is not firmly inserted into the port.Check the cable for visible damage, such as frayed or bent ends, cuts, or kinks, if you are experiencing low or no sound on your Philips TV. If you find any damage, replace the cable with a new one.If you are having trouble with the audio output, try unplugging the cable and plugging it back in to see if the sound returns.If you are still experiencing sound issues after trying all of these steps, when you are unable to fix the problem, they may be able to offer additional troubleshooting steps or suggest sending the TV in for repair. PhilipsPhilips Smart TVPhisips TVSound Not Working Our site can best be viewed with the latest version of Microsoft Edge, Google Chrome or Firefox. Are you having issues with your Philips TV having no Sound but Not Muted? It can be due to several reasons including speaker issues, audio setting issues, Philips TV hardware issues, etc. In this article, I will help you troubleshoot and fix this issue. Lets get started! There are many potential reasons why the volume on your Philips TV may not be working properly. We already know that volume is not muted, so we look into the other causes here. Just check whether your Volume is turned high. Otherwise, it may happen, that you may have overlooked that you kept the volume too low. Here are some of the most common reasons: There may be a problem with the TVs speakers if the speaker cable is damaged or if the speaker cable is shorted out. If it is not possible to operate the TVs speakers, the volume of the sound will not be ideal either. Attempt troubleshooting the speaker cables to see if the sound improves. If youve set audio settings improperly, the volume may not work regardless of whatever else you do. Try tweaking the audio settings to resolve the problem. The audio output on your Philips TV may be set to something other than the embedded speakers. It may be set to Bluetooth headphones, for example. Change the audio output to the internal speakers and the sound should come back. The Philips TVs circuitry might be the issue. If none of the preceding steps troubleshoot the volume issue, there may be a problem with the Philips TV itself. In that case, you may need to contact Philips customer service for support. If you are having trouble with your Philips TV volume, there are a few potential solutions that you can try. Here are proven tips to help you troubleshoot and resolve the issue: If youre having trouble with the volume on your Philips TV, one of the first things you should try is a power cycle. To do this, simply unplug your TV from its power source, wait 10-15 minutes, and then plug it back in. Once your TV has restarted, check to see if the volume issue has been resolved. If youre having trouble with the volume on your Philips TV, it could be because youre not on the right Audio Output settings. Why do you need to check Audio Settings? Most of the time we connect to an external speaker and forget about them turning on. Also, your Philips TV may be connected to an external Bluetooth speaker which is muted. Check the output of your Audio, if it is the Philips TVs internal speakers or if any external device is selected. Turn up the volume in that to enable the audio or Switch back the audio output to your Philips TV internal speakers. If youre having problems with sound on your Philips TV, it could also be due to issues with your HDMI cable. Why Check HDMI Cable? HDMI cables carry sound with video from any external device connected. If you have a set-top box connected to your Philips TV using an HDMI cable, then chances are whether having a loose connection in the HDMI cable or a damaged HDMI cable. Make sure the cable is firmly plugged in at both ends. A loose connection can sometimes cause sound problems. To resolve this, unplug the HDMI cable from your Philips TV and make sure that there are no visible signs of damage. If everything looks good, plug the HDMI cable back in and see if the problem is resolved. If youve tried all of these steps and still cant get the volume on your Philips TV to work properly, it may be time to perform a factory reset. How will Factory reset Help in Audio issue of Your Philips TV? This will restore all of your Philips TV settings to their default state and may also be causing the problem. This will factory reset your Philips smart TV and the TV will then restart with default settings in it. If youre still having trouble, feel free to reach out to your Philips TV manufacturer for further assistance. Have a Warranty on your Philips Smart TV? Check your warranty card that came with your Philips TV and read their Terms and Condition to understand whether it will be covered. Most times customer support helps in knowing that clearly. If you find chat support for your Philips TV customer care, then do jump and ask them. You will find customer support for your Philips TV brand on their website or at least they would have a support mail id or phone number where you can reach out to them. If you have a warranty, then its well and good. Otherwise, you may also visit your nearby technician. Now, Summing up the solution to fix your Philips TV has no sound but is not muted. 1. Power Cycle the Philips TV 2. Recheck the Current Audio Settings of Philips Smart TV 3. Check the HDMI Cable Connection 4. Factory Reset your Philips TV 5. Contact Customer Support of your Philips TV I hope you enjoyed reading this post.In Anirban Saha, Founder & Editor of TechBullish. I love sharing my knowledge through informational articles, how-to guides, and troubleshooting tips for Peripherals, Smart TVs, Streaming Solutions, and more here. Check Anirbans Crunchbase Profile here.Philips is an international conglomerate company based on Dutch. This company sprouted out in the year 1891 at Eindhoven. It is one of the largest electronics company in the global market which currently focuses on the categories like health. Gerald Philips and his father were the possessors for this company. Philips is widespread across 100 countries in this world and having 100 plus employees building the strongest of them. They discontinued with the term electronics from their branding since the year 2013. The reason is that they have found their niche area to be healthcare technology. But this doesnt totally stop down the manufacturing of the electronic products. One of the largest selling product/firm from Philips is their televisions. In this article we are going to focus only on this.We will be looking at a problem case scenario where we will be looking at the following thingsPhilips Tv sound not workingReasons for itFinally the methods to solve itAre you one among those users who have this issue pertaining in your Philips Tv, then this article is for you. So without further explanation, lets move to the main context.Source: Success story Before looking on to the solution, let us now discuss the common causes for this problem to happen. There are several reasons and we will look into them one by one now. This is one of the primary reasons that could be a root cause for this problem to happen. Generally the audio that we are hearing from the Tv is from the broadcasting SAP. If this is not recorded then we wont hear anything. Even though the SAP is turned on, it must be recorded. So we need to turn it off to resolve this issue. Not only this, there are other reasons too. Now, lets move on to the next reason. Sometimes, even turning up the volume of the Tv wont work out. This is because, the Tv speakers wouldve been disabled in the settings of your Tv. This could be also the major root cause for this to happen. To ensure about your Tv speakers functionality, navigating to the audio settings of your Tv can help you out. Some of the Philips Tv models has not the support for Dolby digital audio. If the Tvs audio in such television is playing in surround sound, then you wont be able to hear anything. To change the audio output from surround to tv speakers, it would further discussed in this article. Now that we have discussed the reasons, we will look on to the methods to solve this problem. But before moving on to it, let me just give the usual disclaimer. The methods that are discussed below dont have a success rate of 100 percent. Now lets have a look at them. This is a conventional method that most of us would try to do when some issue occurs in a device. As like that, unplug the tv wire from the wall, wait for a couple of minutes. Dont be impatient to wait for plugging it back. This might actually work at most of the cases.After the minutes of wait, plug it back and wait for the tv to start again.If that works for you then well and good. But if not, then no worries there are other methods too. Let us move to the next method. Back those days, when you wish to factory reset your Tv there wont be a separate option to do it. Instead you would have a reset push button where you have to insert a pin into it. But the current generation Tv models do have factory reset option separately in the storage settings. To factory reset your Philips Tv, follow the below instructions.Navigate to the home page of your Philips TvFind for Settings optionUnder settings, move to Storage and resetYou will be having an option Factory data resellIt will ask for a confirmation to proceed with it. click okayThis will factory reset your tv. This can take up to 15 mins. So wait for a while or have a cup of coffee and come again. Now check whether the problem incurs again or not. If that doesnt help out. Lets check out the next one. To change the audio output to digital output and to PCM, follow the below instructions.Go to Sound from the settingsSelect Digital outputChange from Auto to PCMif that doesnt help you out, then follow the next procedure below.In the same sound settings, navigate to SpeakersChange the audio output from Tv speakers to Digital audio outputThen go to Advanced settingsTurn off the Surround sound If the above three methods doesnt get the job done for you, then follow this one last final step. Do contact your Philips customer care support and get the assistance from them. They will send a technician to your home for the repair service.If your Philips tv come under warranty period then you can claim the cost for services free. If not, then you have to pay the charges. Do follow this method only if the above three methods dont work out for you. Visual plus audio, both are necessary for a truly cinematic experience. If one of them fail to deliver, then it can spoil your whole mood. So in this article to sum up, we have discussed a problem case in the Philips tv. Not only that, we have seen the methods to solve it too. If you are one among the Philips Tv users who face the above discussed problem then this article is for you.Hope you find this article insightful for you to solve the problem! Happy reading! Further Reading: How to reset a Philips Tv that wont turn on ?How to fix Philips Tv Sound but No Picture (2022)Philips Tv wont turn on with remote or button : What to do?[3 Ways] Fix Philips Roku TV has no sound but not muted? movie buff and an ardent fan of smartphone technology happenings in and around this globe. It all started when I had a craze on Googles pixel lineup and that continued for other smartphone brands too. Not only smartphone, be it any technology around us, I wish to keep myself updated on them too. Our site can best be viewed with the latest version of Microsoft Edge, Google Chrome or Firefox. Philips manufactures several different television models with different options that meet the needs of consumers. Occasionally, Philips televisions will encounter sound problems that have an effect on a user's ability to view programs. Though the features on the separate Philips television models are different, the sound problems are common and may not require a service technician. To fix problems with the sound, troubleshoot the machine and perform the repair yourself. Press the "Mute" button on the remote control or press the "Volume Up" button. The most common cause of no sound is accidental use of the television's "Mute" function. Make sure the speaker source switch on the back of the television is switched to "Int" if you are using the television's speakers and "Ext" if using surround sound. If not set properly, you will not hear the television sound. Access the television's equalizer by pressing the "Menu" button, selecting "Sound" and then "Equalizer." A list of sound options will appear on the screen. Use the up and down arrow buttons to select the option you want to adjust, and the right and left arrow buttons to make adjustments to the option. You should use this method of adjusting the sound settings if the audio output is in some way unusual. Check the surround sound speaker wires and make sure they are secured to the audio jacks on the back of the television. In addition, ensure that the surround sound speakers are powered on.
