Saw this as well. Gunsamerica on YouTube has a greak breakdown, can't link right now though. Their facilities highlighted at the end look incredible. I think Ill be picking up one of these PH3s to try Just watched the guns America YouTube. Looks interesting. Like the quick change barrels, although this pinned collar seems like it might lend itself to play, and the supposed lightened bolt lift. It'll be interesting to see some start trickling out. I am just excited as hell! Bought a PH2 last year and love it. The upgrades are really quite a leap forward. Nice that Seekins is really advancing the under 2K production custom (my term) market with things like quick-change barrels. The customer service I have received from them has been nothing short of PHENOMENAL. They also have basically the same as the Vortex VIP warranty. Drop your rifle off a cliff, house fire, run it over with your truck and theyve got you. (My understanding) I mean who does that? I dont know of another rifle maker that does that,Just an exciting company to watch. They also seem to have a great company employee culture. Folks I talk to over there seem to love their job. Made in the USA Reactions:Makinchips208, SokekSolutions, Aescobar17 and 6 others Just watched the guns America YouTube. Looks interesting. Like the quick change barrels, although this pinned collar seems like it might lend itself to play, and the supposed lightened bolt lift. It'll be interesting to see some start trickling out. I agree, although I believe the only ones that need the collar are the aluminum receiver Elements. I like the older design and looks like theyre keeping that in the PH and HITS, just relocating the set screw lower. I agree, although I believe the only ones that need the collar are the aluminum receiver Elements. I like the older design and looks like theyre keeping that in the PH and HITS, just relocating the set screw lower. Oh. That makes sense then. Was half paying attention. Thought he was talking about the pinch bolt earlier then was talking about a collar at the end. Was thinking about buying one of these to jump into NRL hunter but I've got a gut negative feeling on the proprietary action footprint. Not sure if that is an intelligent gut thought or not. Almost everything I have is a form of a Remington 700 footprint. Reactions:Joshf303 Ive been debating a new hunting rifle in 6 creed, 6.5 creed or 6.5 PRC in a folding chassis for a little while. The element hunter looks like I can scratch all three of those itches pretty easily. Itll be interesting to see the reviews as they hit peoples hands and how they perform when they start shooting them I wonder why they didnt run the forend MLoc rail all the way to the end. Looks to stop 1.5-2 for the end. Seekins is tearing it up. I don't see anyone offering what they are at the price they are. Too bad there are no left-hand options. Glen has come a long way since they days of making scope rings. Great for him and the people working with him. I just think it is a great American story. Reactions:TheOE800 I'm glad I didn't by a PH2 in December That's a tough call. I'm glad I bought my wife the PH2-NRL a few months back. The PH3 being heavier and features we/she doesn't need or want. I'm happy with the short M-loc section vs full length. Saves weight and still holds a arca rail just fine. The 90 bolt lift is a non-issue. However I can see that adjustable cheekpiece being prone to having problems. Whether it's gummed up with dust or dirt that makes it fixed in the way of being able to pull the bolt. Or wobbly because it's only held in position from a little spring tension. I would like the barrel change feature though, but again for her application for hunting it's a non-issue. Reactions:Caba What kind of aftermarket support can we expect? I did a quick search, and looks like only Straight Jacket offers barrels currently Glen covered this before. He said that after much testing the 10 twist shot best from his rifles with available factory ammo. This applies to other calibers too. Im guessing that he will add to barrel twist rates down the road. The switch barrel is going to really change the game for this cadre of rifles. Yeah thats just as bad on the 6CM. Sheesh. 8tw in a 6creed will handle everything except 110smk and 112 Barnes. Ive used 8tw with 105hybrids, 108 bergers and 107smk in a 6br with zero stability issue or reduced bc. Tack another 150+fps to the 6br speed and i think the 6creed will be OK with 8, unless the 110 or 112 bullet is what you want. Reactions:Aescobar17 My PH3 is apparently shipping today. New to the forum. I ordered a PH3 online yesterday from EuroOptics. They sent me an FFL request and receipt. The latter had a ship date of that day, which surprised me so I sent them a follow up asking them if the ship date is correct. Their website says backordered and there seems to consensus on the Internet that they won't be available for a month, so I figured "that ship date has to be a mistake." They responded, via email, today that the rifle was shipping today. I still think it's a mistake, but maybe lady luck is shining on me. I keep hoping my luck will change. Fingers crossed yours is better. Last edited: Jan 23, 2025 Reactions:splash77 Page 2 So they just released a whole rifle for 3 years, create a new action and the barrels that everyone had and toolled up for arent comparable. Gun industry at its finest. Last edited: Jan 26, 2025 Reactions:Harman117 and JMo22 Just watched the guns America YouTube. Looks interesting. Like the quick change barrels, although this pinned collar seems like it might lend itself to play, and the supposed lightened bolt lift. It'll be interesting to see some start trickling out. Not sure how they lightened the bolt lift going from a 90 to a 60 since that will give less of a mechanical advantage and you're trying to cock that firing pin the same amount with less ramp to do it. That said, I've never had a problem with any of my 90 bolts, Havak Hit included. I was told by Seekins that old hit barrels work in the new hit rifle but not the other way around. New barrels wont work on the old action. I'm struggling to understand how this would work....all a barrel/action interface is is threads and headspace, which either work or they don't. How can it work for one but not the other? Reactions:Holliday I'm struggling to understand how this would work....all a barrel/action interface is is threads and headspace, which either work or they don't. How can it work for one but not the other? I dont understand it either especially since it works one direction but not the other. Reactions:JMo22 AI AW/AX barrels will work on an AE but AE barrels wont work on them. True AE barrels arent threaded under the lug. If the statement is accurate (I have no clue) Id say something similar changed in those regards since the clamping paw is now inside the action instead of in front of the action on the rail. It could be just like the AI AEs where the old ones werent threaded all the way to the shoulder and now they are. There could be a relief in the new tenons where theyll still work in the old actions but the old barrels wont work in the new. Theres plenty of ways they could be backwards compatible and its not as simple as a thread is a thread. It could also be the bolt nose recess and not be the threads at all. Theres plenty of ways they could be backwards compatible and its not as simple as a thread is a thread. It could also be the bolt nose recess and not be the threads at all. Wouldn't the bolt nose recess affect headspacing and therefor only work one way? I'm curious from an engineering perspective to know how this all works. Wouldnt the bolt nose recess affect headspacing and therefor only work one way? I'm curious from an engineering perspective to know how this all works. what Ive seen is the the new rifles support more of the case head. The new barrel tenon is slightly longer and would interfere with the bolt head of the old rifles Reactions:JMo22 Send my PH2 Seekins Stock back in for an Mlok rail addition for an arca rail.Contacted them and they emailed a RMA w/ FedEx label that afternoon.Shipped same day10 days later(including TWO weekends) back home, Mlok installed.I just cannot say enough about their customer service! Looking at getting a PH-3 from Scheels next. Reactions:rookie7 and jbuck88 Just got my First new model Seekins rifle today... Tracking says my NRL Havak PH3 will be here Monday ! Pics coming soon..... Need one ?? click below Curious if anyone has been running the Hit M3 with the double stack aw mags and how it is doing? And assuming they play nice together.... where is the best place to pick up a bunch of aw mags? If you havent watched the full video where GunsAmerica interviewed Glen and went thru the rifle you should. Very subjective here - I like everything about the rifle except the ugly ass bolt. They should have coated it black. Again, just MO and very subjective. After watching the video and his rationale behind everything he did I have to buy one. Im in search of the 20 model in 6.5 creed. I initially thought he made a very poor move going away from the 700 footprint, but I now see why and feel his way is better. All of the features of the rifle are well thought out even down to the trigger pins. Sign me up. He has designed a better mouse trap IMO. Unppopular opinion, but I feel the only thing redeeming about the R700 footprint, in modern times, was its universal adoption.I am happy to see folks come up with a better mouse trap Reactions:rookie7 and Caba I rec'd my 7mm PRC PH3 in May. I really like it. The adjustable comb, the ultra light magazine, and the full length MLoc are all cleverly done. I prefer stout barrels, so that too was a good fit for me. I immediately spent a couple days trying to understand what ammo types it seemed to prefer. For each ammo type I fired 2x 10rd groups at 100yds, with a suppressor, and used mean radius (MOA) to compare them. Results: Federal Fusion Tipped 175gr .37 (Wow!)Federal Fusion Ascent 170gr .46 The following ammo types all did the same at .61-.67 MOAHornady Precision Hunter 175gr ELD-X, Barnes Vortx 160gr LRX, Norma BondStrike 165grDid less well. Hornady Outfitter 160gr CX, MR .91 Reactions:rookie7, Holliday and Metzger I'm struggling to understand how this would work....all a barrel/action interface is is threads and headspace, which either work or they don't. How can it work for one but not the other? Ai at and ax barrels fit on ae actions, but ae barrels will not work on at/ax. The ae ae had a unthreaded part on barrel journal that lug covered. The at/ax barrel that's fully threaded works with lug.
