

I'm not surprised that I can't play the music in my local (NAS) library with the new GA/Sonos integration. However, is it also not possible to play music that I've uploaded to my Google Play Music playing in the office. Sorry looks like the subscription tier for Google Music is not supported." I've also added "from my library" to the command and that doesn't help. I am also looking to do this. This is easily done with a Google Home speaker so I am surprised that this isn't working on my Sonos One. Sorry, guys, not a decision made by Sonos. These "rules", whether set by Google or Sonos, seem so arbitrary. I can play music uploaded to my Google library from the Sonos app already. I can play music uploaded to my Google library from the Sonos. I guess I don't get the logic, other than to try to persuade people to get a paid sub to Google Assistant to access my library on Google Assistant to access my library on Google Assistant to access my library on Sonos falls far short of Google's own speakers. Time to give Alexa a try. I have the same issue (as I'm sure many meny people do). I have downloaded my music -- it requires a paid subscription. As I understand it, this feature works on other Google Assistant devices such as the Google Home. It also works via the Sonos app. Given that both Google Play Music and Google Play Music. I would not be surprised if this is indeed the case -- that the limitation is imposed by Google. In fact, I seem to recall a few years ago, that the same issue on Google Play Music access came up with Google Home as well. But then, after numerous user complaints, it was "fixed". If this is indeed the case, it would still seem that Sonos is still in the best position to potentially address the issue with the service provider, given their already established relationship with the firm (contacts already established in previous licensing and sharing discussions, etc.). Also, Sonos would have access to their user usage statistics and Google Play Music access issue statistics (gathered from Sonos usage data, this forum, and other sources), which would put them in the best position to best represent the user community in discussions with the provider. Anyways, crossing fingers that our voices are heard... In the meantime, I will probably switch back to Alexa (as the native support for Google's own music services was the primary reason I was looking to switch to Google Assistant)... If this is indeed the case, it would still seem that Sonos is still in the best position to potentially address the issue with the firm (contacts already established in previous licensing and sharing discussions, etc.). Also, Sonos would have access to their user usage statistics and Google Play Music access issue statistics (gathered from Sonos usage data, this forum, and other sources), which would put them in the best position to best represent the user community in discussions with the provider. how people are using Google services. However, Sonos may be able to tell Google that users listening hours haven't dropped, they've switched over to other services. Regardless, letting Google know directly than your unhappy is never a bad idea. Just sent feedback to Google on this issue. Easy to do, just click the hamburger in Google Play Music and click "Help and feedback". The more that do this, the better our chances of it getting fixed.... Oh, not really. But it'll make you feel better This is upsetting. I am in the process of setting up multiple brand new Play:1s, and was in the market to purchase several other products, after years of setting up multiple brand new Play:1s, and was in the market to purchase several other products. reason for the switch from Bose to Sonos was (supposed) full Google Assistant compatability. So I am now finding that I cannot play any of my personal, uploaded music from Google Assistant unless I have a subscription... Is that accurate? I want to be sure, because my next step is returning everything and going back to Bose. At least Bose can play music from my NAS. If I'm going to be tethered to an app on my phone, I'll save the money. Sonos has no control over the subscription requirements, they are set by the music services. Best to direct your anger over at Google Play Music. Uploaded music doesn't even play from a voice command with a paid subscription. That's what makes it even more annoying. I have over 20,000 uploaded tracks in my Google Play library and I can only play them if I use the app instead of voice. Does a playlist containing your music work i wonder? If not, you could use IFTTT and the trigger to play a Sonos Favourite which can be locally stored. It does work with playlists containing uploaded music, at least with the "Thumbs Up" playlist I have tried. Unfortunately when I say "OK Google Shuffle My Thumbs Up Playlist" the tracks are not shuffled and it plays the same tracks in the same order every time - really poor!!! I agree that these rules are a huge disappointment. Using Google Shuffle My Thumbs Up Playlist" the tracks in the same tracks in the same order every time - really poor!!! I agree that these rules are a huge disappointment. Using Google Shuffle My Thumbs Up Playlist" the tracks in the same tracks Assistant to access my library on Google Assistant on Sonos falls far short of Google's own speakers. Time to give Alexa a try. I would've agreed with you, except that I already have Alexa and it's no better ... To make things worse with Alexa, she's really not smart and doesn't understands the request It does work with playlists containing uploaded music, at least with the "Thumbs Up" playlist I have tried. Unfortunately when I say "OK Google Shuffle My Thumbs Up" playlist I have tried. every time - really poor!!! Go to olisto.com, create an account, link to Google Assistant service and Sonos service. Create a "trigg" (automation routine) that sets your playlist. Interesting. Can you test playing just a single song, album, or artist, not a playlist and let me know if that works? Unfortunately there is no way I know of to play a specific song/album/artist/playlist from your Sonos has failed to address. The only thing you can do is play a specific Sonos Favorite, and you have to create a custom GA command for each favorite since Sonos hasn't bothered to support variable values in their IFTTT implementation. Sonos has no control over at Google Play Music. feels like something for Sonos to solve though rather than Google, as I can play my music with no paid subscription from the app (so sonos can work with a free google play music subscription) and I can control it when it's playing via voice (so google assistant can control it when it's playing via voice), the two are just not completely joined up. Sounds like it can be fixed. something's accidentally broken, rather than contractually disabled. Music library on Google Drive - is it possible and how?I would like to place my music on Google Drive and access it from Sonos app, but how do i address the music folder on my Google Drive in the app? You can't play your music folder from google drive. You can, however, sign up for a free Google Play Music account, and upload your music library to that. It works great, and syncs all iTunes playlists. works great on Sonos! OK, thanks! How to activate this in the app? You will need to set up your Google Play Music account and download Google Play Music account and syncs all iTunes playlists. upload to complete. After that, add Google Play Music as a music service In the Sonos app. After you sign in to the service, you will have full access to your music library. I use the Sonos Android app and Google Play Music is only free for 30 days in Denmark, where I live. Are there other possibilities? @wltseng That would make Denmark and exception to the rule that you can upload 50.000 songs to Google Play Music and use those for free. This rule applies in the U.S. and the Netherlands at least. Are you are right on this? In order to initiate the free cloud storage, you do need to provide a credit card number and accept a 30 day free trial of their paid music streaming service. Then, just cancel your free trial of the music streaming service. The free cloud storage of your personal library will still be available. At least that is how it works in U.S. Now it is working, thanks to 106 rally e and wds0001. I use Google Play Music for Chrome on my Windows 10 PC to transfer my music. I have found that if I just open the Google Music app I can cast the podcasts, music stations, etc directly to the Sonos App. No need to transfer music to get it there. In order to initiate the free cloud storage, you do need to provide a credit card number and accept a 30 day free trial of their paid music streaming service. The free cloud storage of your personal library will still be available. At least that is how it works in U.S. Thank you, just got sonos and have successfully followed your instructions, mucky buckets as we say over here! This article will help you set up a Google Home or Google Home Mini, to control Sonos. Once set up, you can use the Google Assistant to play music to Sonos, skip songs, pause playback, adjust the volume, and more. To find out if the Google Assistant is available on Sonos in your region, check our article Google Assistant availability on Sonos.You can also add the Google Assistant directly to your voice-enabled Sonos products. For more information, see our article on setting up Google Assistant on a voice-enabled Sonos product.Make sure your Sonos app is up to date and your Sonos system is running the latest software version. Learn how to update Sonos in this article: How to update your Sonos system. Download the Google Assistant to Sonos Open the Sonos app for iOS or Android and navigate to your voice assistant settings to add the Google Assistant. Sonos S1 Controller app: From the Settings tab, select Services & Voice, then choose Add a Service. When prompted, select Google Assistant from the list.Sign in to your Sonos account. If you've forgotten your Sonos account. service account to both the Google Assistant and Sonos. In the Google Assistant app, check which music service to Sonos. Use the Google Assistant with your Sonos speakerAfter the Google Assistant has been set up, you'll be given some sample commands to test with Sonos to make sure it's working properly. You can also select a default speaker so content always plays in a specific room without saying the room name in the command. To learn more about using the Google Assistant and Sonos together, see our article Control Sonos with the Google Assistant. To see available music services, open the Assistant app for iOS or Android, select your profile icon to get to your account page, and then select Music. Available services are listed under More Music Services. Music service availability will vary by region. In order to use your selected music service with your Google Assistant to play music from iHeartRadio, TIDAL, and TuneIn Radio on Sonos if they're available in your region, but they can't be directly added to your Google Assistant to play music from iHeartRadio, TIDAL, and TuneIn Radio on Sonos if they're available in your region, but they can't be directly added to your Google Assistant to play music from iHeartRadio, TIDAL, and TuneIn Radio on Sonos if they're available in your region, but they can't be directly added to your Google Assistant to play music from iHeartRadio, TIDAL, and TuneIn Radio on Sonos if they're available in your region, but they can't be directly added to your Google Assistant to play music from iHeartRadio, TIDAL, and TuneIn Radio on Sonos if they're available in your region, but they can't be directly added to your Google Assistant to play music from iHeartRadio, TIDAL, and TuneIn Radio on Sonos if they're available in your region, but they can't be directly added to your Google Assistant to play music from iHeartRadio, TIDAL, and TuneIn Radio on Sonos if they're available in your region, but they can't be directly added to your Google Assistant to play music from iHeartRadio, TIDAL, and TuneIn Radio on Sonos if they're available in your region, but they can't be directly added to your Google Assistant to play music from iHeartRadio, TIDAL, and TuneIn Radio on Sonos if they added to your Google Assistant to play music from iHeartRadio, TIDAL, and TuneIn Radio on Sonos if they added to your Google Assistant to play music from iHeartRadio, TIDAL, and TuneIn Radio on Sonos if they added to your Google Assistant to play music from iHeartRadio, TIDAL, and TuneIn Radio on Sonos if they added to your Google Assistant to play music from iHeartRadio, TIDAL, and TuneIn Radio Google Assistant with Sonos, please check our troubleshooting article for some help. Is this actually stored on your own hard drive, and not in the cloud on some Google Server? Sonos has always been unable to reach "cloud" disks, so setting it up as your music library in the Sonos application would provide a failure, I'd expect. So far, Sonos has never said that they intend to support things like Microsoft's OneDrive, or other similar cloud services, but since they never share their roadmap, it's hard to tell what they intend to do until the point at which they release it (or if you're part of a beta test, in which case you are not allowed to discuss it). Given the history, I'd suggest the chances of Sonos supporting such a thing as fairly low, in the single digit percentages. But not zero, either. The challenge for them would be of course that if they support all the other ones, which could require a huge amount of effort, for very little sales impact, which is where Sonos makes the majority of their money. Hi Bruce, Thanks for the thoughtful response. I'm still learning how this new version works. The file is definitely in the cloud, but in this case I also selected that it could be accessible offline which I was hoping would be enough to get Sonos to recognize the files. I can always find a workaround (copying to NAS, moving to a folder on my device, etc.), but I thought I'd exhaust this possibility first. I think your assessment of Sonos development plans is fair and makes sense, especially given the move towards streaming music services that are being much more widely adopted. Seth I heard a rumor once that suggested that the number of Sonos users (which includes me!) that use "local" music is in the low single digit percentages....so I fear there's unlikely to be much development on that front. Somehow, I'm still loathe to spend the money on a streaming service, although I do have some Amazon streaming as part of my Prime subscription. Celtic music). But I've also not really investigated it. My NAS continues to work without issue, and I actually have 99% of the CDs stored in case they need to be re-ripped. This article covers how to play music files stored on your Android device to Sonos. Sonos can't stream these files directly, but you can play them to your Sonos products using Bluetooth or Line-In. You can also move the files to a streaming service or NAS drive and play them from there instead. You can use either Bluetooth allows you to stream your music to your Sonos wirelessly, while Line-In uses a hardwired connection to your Sonos product. You can learn more about how to use these features in our Bluetooth and Line-In articles. Some services allow you to upload your own music. Note that some of these services require a premium subscription to work with Sonos. Apple MusicYouTube MusicDeezerPlexOnce you've uploaded your music to one of these services, the tracks will be accessible through Sonos once you've added the services to get started with using one of the services listed above.NAS driveIf you have a network-attached storage (NAS) drive on your network, you can move or copy your tracks to the NAS and share them with your Sonos system. Once the NAS music from the Sonos to get started. The best thing about Sonos is that you can play music from a multitude of sources. Along with audio from your TV or podcasts or the radio. And I make use of many of these options. My most used sources are Spotify, my record player, and my music from your Sonos speakers is incredibly simple to setup. Keep reading to learn exactly how to play music on Sonos from a computer. We'll cover the two ways you need to know. How To Play Music On Sonos From Computer to play music on your Sonos system. You can play actual audio files from your computer, you can play video files or YouTube videos, or you can play music from Netflix. The most common way to play your own music on Sonos from your computer is by playing videos or music from Netflix. The process for both is the same. Playing Music Files From Your Computer on your compu computer, you can easily play them on your Sonos speakers. In the Sonos application itself (it does not matter whether you have a Mac or a PC), go to "Preference" and look for "Music Library." Once you are there, press the "+" key. You can now choose a music folder. This can be wherever you have a Mac or a PC), go to "Preference" and look for "Music Library." USB drive, a drive that is connected to your PC, from NES, or from a hard drive on your network, etc. Simply choose the folder and then follow the easy step-by-step instructions on the screen to complete the process. Playing Music From YouTube (or a video file that is on your computer) or you want to listen to Netflix on your computer and make it play on your Sonos system, the process is different. These are not actual files on your computer, so you will have to connect your computer, so you will have to connect. Those are the five devices to which you can connect a cable from your computer. Our article comparing the Sonos Amp vs Port can help you decide on the right one for you,. And once connected with the input, those devices can play anything from your PC on any speaker in your house. So, if you have a Play 5 beside your computer, you can take a 3.5millimeter stereo cable and connect it to your Sonos Play 5. Once your computer is connected by wire. If you use the Sonos Connect, Amp, or Port, you will need a 3.5-millimeter stereo cable that adapts to an RFC cable, which is also cheap. For that last option, you will need Mac, or you will have to find some software to emulate Airplay. Airplay is an Apple technology, which is why you need a Mac to Sonos is just as easy as a PC. With the Mac and Airplay, you just go to the upper-right corner of your Mac, and select the Airplay logo. There, you will be able to select a Sonos device on which to play your music. But this option is less reliable than the cable itself, because Airplay is not a very stable technology. You will also have compression on the sound, so the quality will be lower. Plus, there is a slight delay. If you want to listen to a movie, for example, this just isn't a great option. Connecting A Second Computer To Sonos The good thing about Sonos to a PC, you can play any song from that PC on Sonos to a second PC involves using a native Windows tool called "Devices and Printers." Here is how to do it. Click "Start". Click "Control Panel". Click "Add a device". Select the listing for your Sonos device from the window on the screen and click "Next." Click "Add a device". Select the listing for your second PC and you can enjoy more options. How To Stream Your PC's Audio Output To Sonos: Final Thoughts Whether you want to play audio files from your computer on Sonos, or the audio from video s, or sound from Netflix, the setup process is simple. Follow the easy instructions above and you will be listening to music from your computer over your Sonos speakers in no time. Finally, if you want to play YouTube from Android, we also have an article specifically covering how to play YouTube on Sonos has emerged as a leading player in the wireless sound system market.
