For $5 a year, you get a premium number that is easier to remember (think 444-333-1234). Like Google Voice and TextPlus, you can send your texts over Wi-Fi. If you want more freedom, sign up for a
TextNow data plan (starting at 1GB for $9 per month) and pay a one-time cost of $1 to have a physical SIM card sent to you. The Android ecosystem for texting apps is vibrant and growing, and this list is just a sample of messaging apps available. It's a good place to start if you're in the market for a new messaging service. If you want to know if
you've been left on read, turn on read receipts to find out. If privacy is your top priority, check out the top encrypted messages are short written messages are short written messages are a common and
quick form of communication and is the most widely used data application in the world. 74% of cell phone owners engage in text messaging. Whilst originally, an SMS referred to only text, they can now include video, photo and audio files. The keys on a cell phone are used to type messages using the letters of the alphabet. The Invention of Text
Messaging The concept of being able to send and receive text messages via a cell phone was first thought of in the 1980s. Various companies played around with the idea, but the SMS concept was developed in the Franco-German GSM cooperation in 1984 by Friedhelm Hillebrand and Bernard Ghillebaert. They came up with a way to transmit short
(128 byte) text messages using the existing cell phone signalling format. New programming was included into cell towers to allow for this new service when it began to be used. The main GSM group approved the use of SMS in 1985 and began to work towards this service being available to all cell phone users. Different sections of the GSM group
worked on different aspects of SMS such as the specifications, implementations and integration protocols. Who sent the first SMS? The first SMS? The first SMS to be sent was on the 3rd of December 1992, in the United Kingdom. It was sent from a personal computer to an Orbitel 901 handset using the Vodafone network. Neil Papworth of Sema Group (now Airwide
Solutions) sent the text message Merry Christmas to Vodafones Richard Jarvis. SMS was first used commercially by Aldiscon, part of Logica (now part of Acision), with Telia (now part of Elisa) in Finland in 1993. Most
handsets did not support text messaging to start with. However, by the year 2000 text messaging became a viable way to connect with other people. Related ArticlesWhen was the cell phone inventedWho Invented Cell Phones Communication

plans dont include SMS messaging or have exorbitant costs for sending high volumes of texts each month. Fortunately, in recent years, a lot of tools have come up that offer messaging at no cost. As we enter 2024, there is now a robust selection of top-rated, effective apps to secure free phone numbers for texting without blowing your budget. And
thats exactly what well discuss today. When looking for a free phone number for texting, youd also want an analytics feature to track and understand the response rates and other KPIs. Weve handpicked six messaging apps that not only offer a free texting number but also provide advanced features to improve your ROI. After extensive research and
analysis, we have curated a list of Apps to Get Free Number to Text. These softwares are carefully selected based on usability and satisfaction scores, including features, ease of use, customer support, ratings, and reviews from Software to streamline
their operations.1. CallHippo CallHippo is a leading virtual phone system software provider, offering a real phone number in all plans. Whether you want to send updates to customers, share bulk messages, or get in touch with your team, CallHippo makes it seamless with its mobile app. CallHippo contact center integrates with 100+ apps, including
CRM, helpdesk, and sales automation tools, allowing you to create automated workflows. Record calls in real-time to ensure quality and training purposes Utilize insights from call metrics and trends to make well-informed decisions. Monitor live calls in real-time to ensure quality and compliance. Integrate customer data seamlessly with CRM for a unified view
of interactions. Implement workforce management for efficient forecasting and scheduling. Offer omnichannel support through surveys. Transform calls into
actionable data using speech analytics. Empower agents to work remotely with mobile capabilities. Establish seamless connections with other software through APIs and integrations. Track performance effectively with user-friendly dashboards. What People Say About Us? The call forwarding feature, voicemail, and SMS. The 3 things you need
uninterrupted, and Callhippo has provided the best service for those. CallHippo's features streamlined INTECH's workflows, leading to a noticeable boost in efficiency and productivity across their sales team. 2. TextPlusTextPlus provides free phone numbers that can be used to send SMS messages through its multi-platform app and web interface.
You can choose numbers with different area codes and even country codes to text people from a local number when traveling abroad. This allows small businesses, entrepreneurs, and individuals on a budget to establish a professional presence with a local phone number without paying for additional setup. TextPlus monetizes its large user base
through advertisements and provides the numbers for free. TextPlus allows free unlimited calling and messaging through its app. You can choose from a variety of customizable phone numbers, adding a personalized touch to your communication experience. The app supports international messaging, enabling users to connect with friends, family, or
colleagues globally. I downloaded Text Plus for my iPad Pro 11. I had no idea when I downloaded it that it was going to be my new favorite app. Not only is it easy to use, it works flawlessly. Granted, its a little annoying trying to earn credits, so I just paid for a year of unlimited talk and text. Text Plus relies on ads for revenue, which can be a drawback
for users who prefer an ad-free experience or are concerned about privacy. While calls are free, some users may experience limitations in call quality compared to traditional phone services. TextPlus may deactivate numbers after periods of inactivity. Verified SourceForge User Now, to receive a $.04 credit, it makes you watch and tries to get you to
download all sorts of apps. Since the beginning of this year, it has become ridiculous, especially when you try to receive any credit at all. Recommended Read: How to call someone from Computer? 3. TextMe UpTextMe Up is a versatile and free texting app offering a free number to text. Users can acquire a dedicated phone number, allowing them to
send texts, make calls, and receive voicemails. With features like group messaging and photo sharing, TextMe Up provides a comprehensive communication platform. It also supports international messaging and offers in-app credits for additional features. TextMe Up allows users to connect globally without incurring additional charges. The app
facilitates group messaging and multimedia sharing, enhancing the versatility of communication options. I like the fact that you can have multiple numbers from the same account with different area codes and also maintain conversation
history and call log essentially for each number in the same space but still as separate numbers. Some advanced features may be limited to the free version. TextMe Up relies on an ad-supported model, which may be less appealing to users seeking an ad-free communication environment. It's definitely convenient, but it's extremely cliche. Calls are
dropped almost 90 percent of the time. Texts are received as late as two days sometimes or never received. Sent texts periodically never make it to the person to whom they were sent. You May Also Read: Top 7 Texting App for Computer 4. Text NowTextNow stands as a free texting and calling app that provides users with a dedicated phone number
Offering both Wi-Fi and cellular network compatibility, TextNow ensures reliable communication. The app supports multimedia messaging, voicemail, and call forwarding. Users can earn credits for additional features and enjoy ad-supported free communication. TextNow provides a reliable means of communication with dedicated phone
numbers. Users can enjoy multimedia messaging and voicemail services for free. TextNow allows users to earn credits through various activities, providing opportunities to access additional features. Really wonderful, especially when we are abroad; it is possible to send a message from anywhere in the world to Canada and the United States. Also,
phone calls can be made from anywhere in the world to Canada and the United States. The quality was exceptional. Like most other tools in this list, TextNow also relies on advertisements to offer free service. Users may experience variations in call quality compared to traditional phone services. Great app for those without a plan, BUT when in use,
during a call, an ad pops and disconnects you from your call. Also, when NOT connected to wifi, you can't tell WHEN it was sent/received. 5. Google
VoiceGoogle Voice is a communication platform by Google that offers a unique phone number for free calling, texting, and voicemails, and filter spam. Google Voice for business also provides international calling at competitive rates,
making it a versatile choice for users looking for a unified communication solution. Google Voice offers a unified platform for calling, business texting, and voicemail. Seamlessly integrating with other Google Voice offers a unified platform for calling, business texting, and voicemail. Seamlessly integrating with other Google Voice offers a unified platform for calling, business texting, and voicemail.
effective global connectivity. Google Voice provides advanced call management features, such as call forwarding and voicemail transcription. Verified Trust Radius User Google Voice should be the go-to option for home/personal usage. It's rock solid as a backup phone service or even primary. It does well with voicemail and SMS texting. For a
business, its capabilities are behind the competition, and it does not seem to be a priority for Google. Users may experience a learning curve due to the platform's comprehensive features. Google Voice's functionality is highly dependent on a stable internet
connection. Verified Trust Radius User Once one selects a message, one is unable to mark that message as unread again. There is no system for flagging messages to respond to them later or as mentioned above, marking them as unread. Suggested Read: WiFi Texting App6. Text Free is a user-friendly app providing free texting and calling
services. Users can choose from a selection of phone numbers and enjoy unlimited texting with an ad-supported model. Text Free offers features like group messaging, voicemail, and call forwarding. It is available on multiple platforms, ensuring accessibility for a diverse user base. With a user-friendly interface, Text Free ensures ease of use, making
it accessible for individuals and businesses. You can download the Text Free app on both Android and iOS to ensure a seamless connection. TextNow allows users to create and customize voicemail greetings. This is the easiest product/app to use. You can download the Text Free app on both Android and iOS to ensure a seamless connection. TextIng
and everything else are excellent! You can set up notifications as well. The ad-supported model may be a drawback for users seeking an ad-free communication environment. Some advanced features may be restricted on the free version. WhatsApp hasn't caught on in the States like in other countries (India has more WhatsApp users than people living in the US). Still, with nearly 100 million users and cash transfers in the pipeline, it won't be long before it's on your phone. WhatsApp
offers apps on the desktop. You don't need to reach out to your phone to continue communication over the platform. In-app purchases $0.05 $399.99 per item Subscription No ChromeOS support Yes Publish date Jan 30, 2014 There's not much that distinguishes Messenger from its nearest competitor, WhatsApp, other than Facebook's massive user
base, which is tied into Messenger. That alone has made Messenger doesn't require a phone number like WhatsApp, meaning you don't need a plan (or a phone) to use it. In addition, Messenger doesn't require a phone number like WhatsApp, meaning you don't need a plan (or a phone) to use it. In addition to its Facebook-integrated desktop version, Messenger offers a more
streamlined mobile app. In-app purchases $4.99 $289.99 per item Subscription Yes ChromeOS support Yes Publish date Sep 6, 2013 On the surface, Telegram seems a lot like WhatsApp or Messenger. It offers text messaging, voice and video calling, multimedia (including emojis, GIFs, and stickers), and group chats. When you delve into the service, it offers text messaging, voice and video calling, multimedia (including emojis, GIFs, and stickers), and group chats.
becomes clear that Telegram is different. Telegram groups can accommodate up to 200,000 members, and it has channels (like a cross between a subreddit and a chat room), which means Telegram functions more like a social network than a messaging app. Unlike WhatsApp and Messenger, Telegram offers a premium plan to unlock more features
for your account. Even though SMS messaging isn't as prevalent internationally, it's still one of the most common forms of messaging in the US. In addition to the interpersonal texting we're used to, SMS has become the de facto method of one-time password delivery. In other words, the messaging standard isn't going anywhere soon. SMS messaging in the US.
apps come in two flavors: apps that work with your existing phone plan, essentially replacing your default messaging app, and apps that provide you with an additional phone number from which to text, often with limitations. In-app purchases No Subscription No ChromeOS support No Publish date Nov 12, 2014 Messages is the king of SMS on
Android devices, with over one billion downloads. On top of standard SMS and MMS messages supports RCS messaging app supports RCS messaging app supports are end-to-end encrypted and can be sent over Wi-Fi, bypassing cellular networks. Messages is integrated with
other Google services, meaning you can set reminders or add info to your calendar from the app. In-app purchases $6.49 per item Subscription No ChromeOS support Yes Publish date N/A Chomp has been around since 2013, and it stands above other apps with its customization options. Do you want to change the LED notification color? Chomp can
do that. Do you want to change colors, fonts, and ringtones? Chomp has that covered. In addition, you can schedule when you want messages sent, add a signature to your texts, or lock them behind a password to keep them safe from prying eyes. In-app purchases No Subscription No ChromeOS support Yes Publish date N/A Google Voice transcends
the label of a mere messaging app. When you sign up for the service, you get a texting app (SMS and MMS, no RCS). You also get a new phone number with voicemail and free unlimited calling to any number in the US or Canada (except for 800 numbers). You can make international calls for as little as $0.01 per minute. The only caveat is that you
must be in the US to sign up for Google Voice. After you're signed up, you can call US and Canadian numbers for free anywhere in the world where you can access the internet. In-app purchases $0.99 $44.99 per item Subscription No ChromeOS support No Publish date N/A TextPlus is similar to Google Voice, except it has more limitations. It offers
free SMS texting over Wi-Fi to the US and Canada. You can also choose the area code of your new phone number, you can change it for free. One drawback to the app is that you can only text within the US and Canada,
but you can call almost anywhere in the world at rates starting at $0.02 per minute. In-app purchases $0.99 $99.99 per item Subscription Yes ChromeOS support No Publish date Sep 1, 2012 TextNow gives you your own phone number and unlimited texting and calling within the US and Canada. TextNow is ad-supported, so its basic services are free
It also has several subscriptions to enhance your experience. For $5 a year, you get a premium number that is easier to remember (think 444-333-1234). Like Google Voice and TextPlus, you can send your texts over Wi-Fi. If you want more freedom, sign up for a TextNow data plan (starting at 1GB for $9 per month) and pay a one-time cost of $1 to
have a physical SIM card sent to you. The Android ecosystem for texting apps is vibrant and growing, and this list is just a sample of messaging apps available. check out the top encrypted messaging apps on Android. Mobile messaging apps on Android. Mobile messaging apps provide a great alternative to email and texting, thanks to social networking features, strong security, and free video calls. You might be familiar with popular ones like Facebook Messenger and FaceTime. But there are many more options out there, each with its own
special features. WhatsAppis a mobile text messaging app designed forsmartphones andtabletsthat lets you send text messages, make VoIP calls, and share files from your phone or computer. It also lets you share your GPS location, and you can view the other person's location without leaving the app, thanks to a built-in map. Set a status message for
all of your contacts to see without messaging everyone individually, and follow channels on the topics and people that interest you. This app also includes access to Meta AI for image generation, topic-based communities, disappearing messages, and polls. Snapchat differs from most mobile communication apps in that it specializes in sending
multimedia messages that self-destruct after a predetermined amount of time. You can also send messages without pictures, play with fun and interesting filters and lenses, view stories from friends, and make video and audio calls. Snapchat also supports highly customizable Bitmojis to personalize your digital avatar. Telegram is a cloud-based
messaging service accessible from all of your devices. Unlike most messaging apps, it allows you to edit and delete messages even after sending them. Additionally, you can mute notifications for specific durations, send files (any type and size), make audio calls, and share your location. It also lets you send messages that automatically delete after a
designated time. Viber users can text and call each other for free. Group text chats can include up to 250 members, or join a Community to chat with an unlimited number of people (1 billion is the real limit!). It works a bit like a social media site since you can include polls and quizzes in your chats. Your favorite chats can be organized in folders,
news stories are just a tab away, and a unified search box makes it easy to find contacts, groups, Channels, Communities, and bots. Voxer is a walkie-talkie or push-to-talk app that delivers live voice message is instantly played through your friend's phone speakers if thephone is turned on and the app is running or stored as a recorded
message like voicemail. Voxer also supports texting, photo messaging, and encryption. You can also make notes to yourself and star and share messages. In the settings are lots of options to customize how the app works for example, turn on a setting to record with your headphones' play/pause button, activate noise supports texting, and opt to use the
volume down button as a Push to Talk button. Voxer Pro is the only way to get features like unlimited message recall, Extreme notifications, hands-free walkie-talkie mode, and more. Use LINE for free one-on-one and group chats with your friends from anywhere. With free domestic and international voice and
video calls, you can call your friends and family as often as you want. Some unique features include photo albums, official accounts with publicly accessible feeds, two-factor authentication, a passcode lock, and a toggle to reject any messages from non-friends. The core communication features are all free, but LINE offers premium stickers, themes
and games for a fee. Talkatone offers free voice calling and text messaging over Wi-Fi or data plans. It turns your tablet into a phone, even if it doesn't have a cellular plan. When you sign up, you get an actualphone number for free. You can call not just other Talkatone users but even regular landlines and cell phones. This messaging app works like
your phone's calling and texting features. You can change ringtones, hide texts from showing in notifications, change your voicemail greeting, block numbers, access your phone's contacts, and more. Paying unlocks more features like call forwarding and voicemail transcriptions. You can also remove ads for a fee. Silent Phone supports one-on-one
video chat, multi-party voice conferencing for up to six participants, and voice memos. Calls and texts between Silent Phone users are encrypted end-to-end on mobile devices and texts can be set to self-destruct after a set time, making the app ideal for businesses that handle sensitive data. A Silent World subscription lets you call users who don't
have a Silent Phone account. HeyTell is another push-to-talk app that allows for instant voice message plays when they open the app. If the recipient has the app open at the time of the message, it plays for them automatically. One thing that sets this
                 apart is that you don't have to make a user account to get started. Enter your name and add contacts by their phone number or email address. HeyTell is free, but there are in-app premium optionsfor advanced features like ringtones, a voice changer, message expiration, etc. There are a few reasons you may want to use a messaging the contacts by their phone number or email address.
app instead of traditional text messaging. For example, you don't have to pay extra fees to chat with people in other countries, and you don't even have to give out your phone number in most cases. Messaging apps are beneficial for contacting co-workers outside of regular work hours since you can send documents and make video calls. For
distributed workforces, messaging apps allow employees in different time zones to conduct meetings and keep in touch throughout the workday.10 Must-Have Android Apps for Safe and Secure Verification CodesThanks for letting us know!Get the Latest Tech News Delivered Every DaySubscribeTell us why! sent. Choose from Chomps themes to spice up how your chat app looks! 8. TextFree Device compatibility: Our eighth-best free texting app for iPhone and iOS, Android, and Web-based devices. Key feature: Unlimited text and calls TextFree is an ad-supported, free texting app that lets you choose a phone number and area code. You get unlimited calls
and texts with your account. Signing up is a breeze. Download the app on your mobile device, or sign up using an email, but verifying requires an existing phone number. How to ensure your free texting app, paid or free, provide an easy and convenient way to stay in touch with
friends, family, and colleagues, they have their pitfalls. One of the biggest disadvantages or communicating in text versus face-to-face is the risk of someone accessing your messages or device without your permission. Finding a secure texting app will ensure that hackers dont intercept your conversations or gain access to your personal information.
These are the features you should look for to keep your text messages private and devices safe: End-to-end encryption: Check for this essential feature, which encrypts and hides your messages feature is present and enabled, so the app
can automatically delete a text message from the chat after a set time when you want it to. Two-factor authentication: Prevent others from accessing your texting app with two-factor authentication. Prevent others from accessing your texting app provides
storage encryption so that anyone accessing your phone unlawfully cant read the data stored on it. Disabled screenshots: Protect your chats against unauthorized message capturing and forwarding by opting for a texting with
colleagues and friends, lets answer your questions about these tools: All the texting apps we mentioned are free to use and download. Viber and Telegram have optional paid subscription offers. Messenger is a free texting app that lets you text without a phone number. Instead, you can sign up by creating a Facebook account with an email address.
The best free texting app for your iPhone or Android is the one that your family, friends, and colleagues are using. In other words, the best chat app will reach your intended recipient (because they also have the app) and elicit replies from them. You may need multiple messaging apps as different people have different chat app preferences. Signal is
considered the most secure free texting app. It includes several security features, such as end-to-end encryption by default, disappearing messages, an incognito keyboard, screenshot security audits. In addition to keeping up with friends, family, and
colleagues, the best texting apps let you keep in touch with your audience and nurture your relationship management platforms (CRMs) like

start reading now. Free text apps offer different features than the standard SMS texting app built into your phone. Many third-party texting app built into your phone comes with a built-in texting app,
but you might not always want to use it. After all, SMS texting apps that can use WiFi instead or have other advantages beyond the standard texting app on your phone. Here are seven of the best options that are available for
both iPhone and Android. WhatsApp WhatsApp is a secure and free texting app in the world with over 2 billion users, which means that if you need to text someone, there's a pretty good chance that they are already using
WhatsApp on either iOS or Android. Among its many features, WhatsApp supports free texting, photos, videos, file transfers, voice messaging, and video chat. It does that with full end-to-end encryption, as well. And because you can have group chats with up to 256 participants or video calls with four people, it can accommodate plenty of
communication scenarios. Viber Viber isn't as well known in the US, which means you might struggle to get other users to install it on their iOS or Android device. Even so, it's a well-rounded text messaging app that can handle the full range of communication needs. You can use it for text chats with up to 250 users at once, as well as make voice and
video calls with up to 40 simultaneous participants. Viber features full end-to-end encryption for all text and calls, and you can exchange secret keys with select contacts for enhanced security. With a Viber Out subscription, you can also use the app to make calls to any landline or mobile phone number, even if that person doesn't have a Viber account.
Messenger You don't need to use Facebook to text with Messenger. Thiago Prudncio/SOPA Images/LightRocket via Getty Images Messenger is Facebook user to take advantage of it. Even so, it earns much of its popularity due to its
connection to Facebook and the fact that it's convenient to message while using the social media platform. Messenger supports group texts with up to 150 users at once, and you can switch to Messenger's "secret" mode, which applies end-to-end
encryption to your text messages. Telegram Telegram is focused almost solely on texting, with less emphasis on video chats. It supports a virtually unlimited number of users you can send secret chats that self-destruct after a set time, so there's no
record of them on your iOS or Android device. You can, of course, send photos, files, and audio along with text. You can take any one-on-one chat to video, but group chats can only be upgraded to voice calls. Signal Signal is among the most secure texting apps available with complete end-to-end encryption. Thiago Prudencio/SOPA
Images/LightRocket via Getty Images While many texting services have, in recent years, added end-to-end encryption, Signal had it baked into text, voice, and video conversations from the beginning. It's also operated by a nonprofit organization that has no stated interest in reselling your private data, nor does the app have any advertisements. All
that adds up to Signal being an excellent choice for secure, private and safe texting. While it's available for iOS and Android users have an additional benefit: You can configure Signal users will be encrypted. TextNow TextNow is
```

an inexpensive alternative to a traditional wireless plan and comes with free texting. Dave Johnson Signing up for TextNow means you can use your phone (iOS or Android) even without a traditional wireless data plan when you sign up, TextNow means you as SIM card for your phone that gives you voice and texting over its cellular network, with your own phone number, for free. That makes TextNow a great option for a backup phone or a phone to give you any data, so you'll still need WiFi to use ordinary apps. But TextNow gives you the basics including texting for free, though the TextNow app will host banner ads to pay the bills. Text+ Like TextNow, Text+ can give you voice calling and texting on iOS and Android. Unlike TextNow, which sends you a SIM card, Text+ uses your phone's WiFi, which you'll need to for Text+ to work. You get a phone number, unlimited free texting, and your outbound voice calls cost \$0.02 per minute (incoming calls are free). A white circle with a black border surrounding a chevron
